If your printer is not printing from your computer, there are several troubleshooting steps you can follow to identify and resolve the issue:

- 1. Check the Printer Connection:** Ensure that the printer is properly connected to your computer or network. For wired printers, verify that the cable is securely plugged in. For wireless printers, make sure it is connected to a functioning Wi-Fi network.
- 2. Check Printer Status:** Look at the printer's display panel or check the printer status on your computer. If the printer is in a Stopped state, there may be an error such as Out of toner or Off-line.
- 3. Restart the Printer:** Turn off the printer, wait about 30 seconds, and then turn it back on. This can often resolve temporary issues.
- 4. Run the Printer Troubleshooter:** Use the built-in printer troubleshooter on your Windows computer. Go to Settings > System > Troubleshoot > Other troubleshooters, and then select Run next to Printer.
- 5. Reinstall the Printer Driver:** Right-click your printer in Device Manager, select Uninstall device, restart your computer, and then reinstall the driver. If the driver is the latest version, try switching to a generic in-box driver.
